

Smart Cleaner

ABSTRACT

- The advancements made in technology of robotics have made life of mankind very much easier and comfortable.
- Cleanliness begets a healthy life. However in the hustle and bustle in today's world cleanliness has been neglected
- A smart floor cleaning robot that allows cleaning the floor by giving instructions to the robot. This robot makes floor cleaning process easy and fast utilizing a wireless robotic cleaning system.

OBJECTIVES

- Smart floor cleaning robot has been designed for home and office environments.
- This robot will be using water storage with anti-infection solution which is pumped with water pump motor.
- There will be a cleaning cloth attached to the bottom which will help to clean the floor.
- The proposed system is a manual system and works on a switch

BENEFITS

Owning a smart cleaner is hands down one of the most effective ways to reduce the amount of time and effort you spend cleaning your floors.

- Easy Handfree Operation
- Remote Control Features
- Lightweight & Compact
- Cordless Design
- Less Noise
